1183rd meeting, November 26, 2014

Stephen Huston presented his talk: **Monetary History — Debunking the Myth of 1776**

The current version of the history of money builds on the description of barter as proposed by Adam Smith in his classic work, *Wealth of Nations*, published in 1776. He argued that direct barter required face-to-face, inefficient trading activity. Smith was a moral philosopher explaining why people do what they do. His story barter and the history of money formed the foundation of the field of economics. Unfortunately, he made it up.

Inscribed objects had been used to record trading activities for nearly 12,000 years. In effect, these documents (typically clay tablets) recorded values and are analogous to money of account. Current theories posit that writing evolved from these early symbols used for accounting.

Early money, really coins, did not “circulate” widely as Smith proposed, nor did its use spread rapidly. Coinage as it developed was primarily local and only slowly became money of account as opposed to replacing barter.

Exhibits:

Dan shared selections from the PCNS archives including early banquet photos and a photo album of PCNS presidents (through 1994).
